

Company:	<p>GrEnergy Ltd Commerce Way Lancing West Sussex BN15 8TA www.greenergy.co.uk</p>	
Established:	2006	
About GrEnergy:	<p>We are a team of experienced and qualified Engineers who have worked together for many years. We all share a passion for renewable energy technology but recognise that it is not well understood or appreciated by most people. Our main aim is to help potential customers to become aware of the significant economic and environmental benefits of these systems and to fully support them in embracing such equipment. We believe we have achieved this by providing easy to understand information on our website and by using the technology in our own homes so that we can clearly and accurately explain it to our potential customers. You can come and see it in action too!</p> <p>GrEnergy specialises in Solar Thermal systems (for your hot water) and in Heat Pumps (for heating of your home and your hot water). We focus on these technologies because we believe that they are truly efficient in terms of economic and environmental benefits.</p>	
Benefits of GrEnergy installation:	<p>GrEnergy has been assessed against the stringent requirements of the BRE (Building Research Establishment) Global and we are proud to have achieved their standards in fair pricing, technical competency and quality. GrEnergy are similarly accredited with REAL (Renewable Energy Association) and the Solar Trade Association.</p> <p>We aim to provide tangible benefits to our customers by carefully investigating or trialling our selected equipment before we are happy to promote it. If we wouldn't have it in our own homes, we won't be offering it to you. We do our best to take any risk out of your investment. We do not use contract teams to install equipment but undertake the fitting ourselves. We take pride in our attention to detail and in our friendly service and thus, many of our new clients come via very satisfied customer recommendations.</p>
