

WELCOME, to the GrEnergy Summer 2009 Newsletter!

Thank you for your interest in GrEnergy and for your support in recent years. We hope you don't mind us keeping you up to date with our achievements and progress and with Eco events and opportunities in your area.

At last the summer seems to have materialised and it's an ideal time to take advantage of the rich and freely available natural resources that are just waiting to be exploited! See our **SPECIAL OFFER!!**

(Times to be confirmed)

Pulborough Harvest Fair
East Glebe Field, Pulborough.
Saturday 26th September 2009.
(11.00am – 5.00pm).

GREENERGY MAKES THE GRADE

The GrEnergy Team have been working hard over the last year to earn accreditation as BRE approved Heat Pump installers. Heat Pumps are the next generation of boiler which will soon be used in all new homes. They very efficiently extract heat energy from the air or ground to heat your home and your hot water. Since this energy is free, Heat Pumps can significantly reduce your heating bills.

The BRE Accreditation brings many benefits that we can pass on to our customers. An important one is that through us, you can now receive a government grant towards your heat pump installation. We are, of course, also accredited solar installers. Please contact us for grant information. **See overleaf for our promotional voucher.**

An 8.5kW Mitsubishi Air Source Heat Pump installed by GrEnergy

WOKING SHOW HOME/OAK TREE HOUSE

GrEnergy are delighted to be involved with the Woking Show Home, otherwise known as Oak Tree House in Knaphill. Over the last year the property has been transformed from an ordinary 3-bedroom detached house into a showcase for energy efficiency, renewable technology and water saving improvements. Those who are keen to make a difference can see for themselves how energy can be created from natural sources, as both solar water heating and solar photovoltaic panels have been installed to harness energy from the sun. The building has a highly efficient central heating system too and is very well insulated to ensure that as little energy as possible is wasted. Low energy appliances and lighting help to lower electricity consumption in the home.

Continued overleaf...

WOKING SHOW HOME/OAK TREE HOUSE Continued...

The increasingly precious water resource is carefully protected by using special taps and shower heads and by harvesting the rainwater collected from the roof.

In the garden, carefully chosen drought-resistant plants, wildflower turf and decking made from sustainably-sourced timber lead the way to fruit and vegetable beds and a composting area.

If you would like to visit Oak Tree House, please contact us for details.

GREENERGY'S SUMMER OFFER!!

With our savings bringing us very little benefit at the moment, you can make yours work harder for you by investing in Energy Efficiency this summer. And we can help you stretch them that much further with our special offer!

This voucher entitles you to a £200.00 discount off your Solar Thermal or Heat Pump Installation.
Offer valid until 30th September 2009
Offer supersedes any other offer by GrEnergy Ltd.

Please quote reference NL0609.

SKY TUNNEL

GrEnergy are now installers of Sky Tunnels. If you have an area in your house or office that needs a bit of brightening up, why not give GrEnergy a call.

Before After
Sky Tunnel installed on an upper landing

Natural lighting is vitally important for safety and for your well-being as well! See our website for more information or give us a call.

SOLAR PANELS

Solar panels are at their most productive for the next few months and can provide virtually all of your domestic hot water for you. Now that we've lost those cold evenings you can completely switch off your boiler for a well earned rest!

Government grants are available to all and some local authorities are also providing significant assistance (100% in some cases!!). And with our special summer offer – what are you waiting for?? Call us now for any information you need.

SUNTHING TO THINK ABOUT...

The fuel that the Sun burns to provide us with free solar energy won't run out for another 5,000,000,000 years. (Don't let that delay you in installing a solar panel!!)

If it could be properly harnessed, enough solar energy falls on the earth in just one hour to meet the whole world's energy demands for a year!

It takes 8 minutes 17 seconds for light to travel from the sun's surface to earth. So what you see is what the sun looked like 8 minutes and 17 seconds ago!

A bolt of lightning is hotter than the surface of the sun.

Man can now produce Lasers that are a million times brighter than the sun.

If it were possible to travel to the sun by bus and several young couples did so, if they travelled at 70 mph, the journey would take about 150 years! The couples themselves would die of old age before reaching their destination as would their children, grand children and probably their great grand children. I just hope they remembered to take their packed lunch and sun block...
